Art Unit: 3753

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3,9,19 and 26 are rejected under 35 U.S.C. 102 (b) as being anticipated by Shafer et. al. Shafer discloses an air control system having an enclosure which is coupled to the pump (152), pressure monitor means (156,158), and valve members coupled to the enclosure being in fluid communication with the air bladders of the mattress (338,340).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Serial Number: 08/901144 Page 3

Art Unit: 3753

Claims 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kalavitz et. al. in view of Walker. The patent to Kalavitz et. al. discloses all the claimed features with the exception of being used with an air inflatable mattress. It is noted that while the patent to Kalavitz et. al. does not specifically disclose a pump, the vehicle air supply disclosed is considered to include all types of compressed air supply including a pump. The patent to Walker discloses that it is known in the art to employ a control system for a air mattress for the purpose of allowing the user of the mattress to adjust the pressure in the mattress for comfortableness. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to use the control system of Kalavitz et. al. for an air mattress for the purpose allowing the user to adjust the pressure in the mattress for comfortableness as recognized by Walker.

Claims 10, 11, 12, 17, 27, 28 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kalavitz et. al., in view of Walker, as applied to claim 16 above, and in further view of Sember. The patent to Kalavitz et. al. as modified by Walker discloses all the claimed features with the exception of having a plurality of independent air bladders having independent valves, which can communicate fluidly. The patent to Sember discloses that it is known in the art to employ multiple independent air bladders having independent valves for communicating fluidly for the purpose of allowing the bladders to be adjusted separately. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to employ in Kalavitz et. al. a plurality of independent air bladders having independent valves for communicating fluidly for the

Serial Number: 08/901144 Page 4

Art Unit: 3753

purpose of allowing the bladders to be adjusted separately as recognized by Sember. It is noted that Sember discloses "at least" two bladders/valves therefore it can be read as having either 2 or 3 bladders/valves.

Claims 4-8, 13, 14, 15, 18, 20-25, and 30-32 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Meredith H. Schoenfeld whose telephone number is (703) 308-3146.
